

New custom-engineered, heavy-duty GS-80 horticultural label applicator with label splitter/rewinder helps greenhouse potted plant production to bloom.

The Packaging Challenge:

Economically automate the application of labels on potted plants, often in harsh outdoor environments, while allowing for quick changeover based on the type and size of plants.

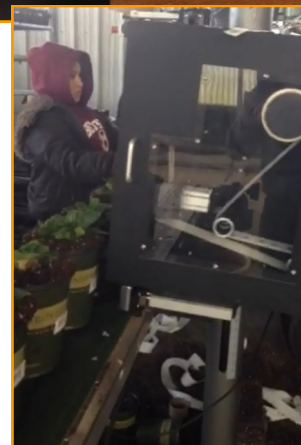

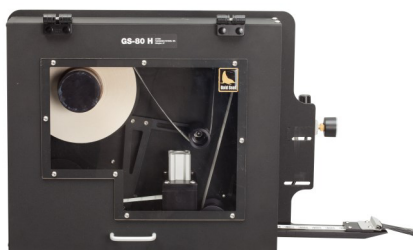

The Packaging Solution:

The owners of this 80-year old family-owned greenhouse contacted Fortis Solutions Group for help. In response, we custom-engineered a Gold Seal® label applicator for their application and industry.

The Packaging Results:

The greenhouse owners are delighted with the new GS-80. *"Fortis Solutions Group has been 100% committed to developing a labeling system that works. They understand the need for consistency and reliability, and we were willing to evaluate and improve all of our processes related to label purchasing, printing and application. Thanks to Fortis Solutions Group, we are able to apply a variety of specific labels to all our products and improve our potting speed and efficiency."* On top of that, the price of the GS-80 is a fraction of the cost of anything else on the market... and it's made in the USA. Talk about a win-win!
